

# файл шаблона detail.php

This template file defines how the image detail page looks.

See for the implementation at <lib/tpl/dokuwiki/detail.php> for the detail page of the 'dokuwiki' template.

## Image Metadata

The default detail page shows image metadata below the image. This can be configured via the `conf/metadata.php` and `conf/metadata.local.php` files. See [EXIF and IPTC metadata](#) for more details.

You can show the metadata tags as a description list by calling the `tpl_img_meta()`. When you like to display it differently, you can retrieve the metadata tags with `tpl_get_img_meta()`, and create your own html.

Image metadata can be accessed through the `tpl_img_getTag()` function. The function accepts either a single tag name or an array of tag names. When multiple tags are passed the function will return the first non-empty tag.

```
// access a single tag
echo tpl_img_getTag('Date.EarliestTime');

// try multiple locations:
echo tpl_img_getTag([
    'Iptc.Byline',
    'Exif.TIFFArtist',
    'Exif.Artist',
    'Iptc.Credit'
]);
```

The following tags are available:

```
Simple.Raw
Simple.Camera
Simple.Title

Date.Time
Date.TimeSource
Date.TimeStr
Date.EarliestTime
Date.EarliestTimeSource
Date.EarliestTimeStr
Date.LatestTime
Date.LatestTimeSource
Date.LatestTimeStr
```
